Dear Hiring Manager,

I am writing to express my interest in a Site Reliability Engineer or Lead DevOps role at your organization. With over a decade of hands-on experience building and maintaining enterprise-scale distributed systems across AWS, GCP, and Azure, I bring a data-driven approach to reliability, performance, security, and operational excellence backed by strong platform engineering and DevSecOps fundamentals.

In my current role as Lead SRE at Permission.ai, a Web3 advertising platform on the Polygon blockchain, I built the GCP infrastructure from scratch using Terraform/Terragrunt, deployed private GKE clusters with Istio Ambient Mesh for zero-trust mTLS, implemented Cloud Armor WAF for Layer 7 protection, and established hardened CI/CD patterns with distroless containers and secure mobile build/signing pipelines.

Most recently, I designed and productionized a Hermes-based DevOps/SRE automation assistant that uses a Hermes-to-Claude bridge with read-only Kubernetes, GitHub, Slack, Jira, and Confluence integrations. The agent acts like a Lead SRE copilot for troubleshooting: it can inspect pod health, logs, events, GitHub Actions failures, PR context, Jira tickets, Confluence runbooks, Slack threads, and screenshots while operating inside strict guardrails. This gives engineering and operations teams faster root-cause analysis and lower toil without granting unsafe production privileges.

What differentiates me is a consistent record of measurable, cross-company impact. At CloudShape Inc., I managed multi-cloud DevSecOps infrastructure for enterprise clients. At Gettr USA Inc., I supported reliability for a global social media platform, reducing incident response time through stronger observability and operational discipline. At OpsWorks Co., an AWS Advanced Tier Partner, I served enterprise clients including Vodafone, and at Arbisoft I supported large-scale software delivery for globally recognized platforms.

Beyond engineering, I invest heavily in community and team growth. I maintain 110+ open-source repositories, have Arctic Code Vault Contributor recognition, and have created 300+ tutorial videos on my DevOpsGang YouTube channel. My AWS Solutions Architect Professional, AWS Solutions Architect Associate, and Certified Kubernetes Administrator credentials complement real-world experience managing mission-critical distributed systems.

I would welcome the opportunity to discuss how my skills in site reliability engineering, platform engineering, cloud automation, and AI-assisted operational tooling can contribute to your team's success. Thank you for your consideration.

Sincerely

Muhammad Asim
